

## Department of Navy SBIR Experimentation Cell (DoN-SEC)

The DoN-SEC mission is to support the SBIR community by offering facilitation, mentoring, and training in all aspects of experimentation, highlighting its benefits to explore innovative capabilities.

# SEC Investigative Continuum (SIC)

*SIC is a collaborative continuum to identify and navigate challenges that can arise during experimentation planning. Such challenges include engineering and operational processes, schedule alignment, supporting resources (platforms, systems, etc.) and other issues that can prevent or delay a SBIR's execution.*

## About Us

The SIC team, as a project within DoN-SEC, collaborates with stakeholders to identify common challenges in navigating experimentation processes, then works to provide relevant solutions for the SBIR community.

## Vision

Provide effective and sustainable process knowledge to enable the SBIR community to efficiently use experimentation - resulting in less attrition and more relevant Objective Quality Evidence (OQE).

### RESEARCH

Research empirical information and develop a problem statement

### STAKEHOLDER ANALYSIS

Identify and analyze stakeholders to understand their influence, impact, needs, and expectations

### COLLABORATION

Facilitate stakeholder collaboration to identify possible solutions

### REPORTING

Collect the outcomes and share with community

### CONTINUOUS IMPROVEMENT

Determine impact and collect metrics
